

User Journey Funnel Analysis

Generated on: 30-05-2026

This report analyzes the user journey from website visit to final purchase.

The objective is to identify conversion bottlenecks, user drop-off points, and opportunities to improve business performance.

Executive Summary

Total Users: 10,000

Total Visitors: 10,000

Total Signups: 5,000

Total Cart Users: 1,525

Total Purchases: 737

Overall Conversion Rate: 7.37%

Visit -> Signup Drop-off: 50.00%

Signup -> Cart Drop-off: 69.50%

Cart -> Purchase Drop-off: 51.67%

Key Findings

1. Largest drop-off occurs at: Signup -> Cart
2. Overall Conversion Rate: 7.37%
3. Funnel optimization should focus on reducing abandonment at the highest leakage stage.

Chart 1: Funnel Overview

Insight: This chart shows user progression through the funnel and highlights where users leave before completing a purchase.

Chart 2: Conversion Rate by Device

Insight: This chart compares conversion performance across devices and helps identify device-specific optimization opportunities.

Chart 3: Conversion Rate by Traffic Source

Insight: This chart identifies which traffic sources generate the highest quality users and strongest conversion rates.

Chart 4: Location vs Device Heatmap

Insight: The heatmap highlights conversion patterns across different locations and devices.

Business Recommendations

1. Prioritize reducing drop-offs at: Signup -> Cart
2. Simplify the signup process.
3. Improve product page design and CTA visibility.
4. Optimize checkout experience to reduce cart abandonment.
5. Increase investment in the best performing traffic sources.
6. Improve mobile responsiveness and page load speed.

Expected Benefits:

- Higher conversion rates
- Increased revenue
- Better user experience
- Improved marketing ROI
